

MAGNESIUM IS AN ESSENTIAL ELEMENT FOR PHOTOSYNTHESIS.

MAGNESIUM DEFICIENCY

Magnesium deficiency causes yellowing between leaf veins, mainly in the older leaves. Yellowing of the leaves (Chlorosis) may start at the leaf tips and leaf margins & progress inward until the whole leaf is yellow. This can be followed by the curling of the leaf margins and leaf drop. The deficiency can also move into the younger leaves as magnesium is very mobile within the plant.

Magnesium Sulphate helps overcome magnesium deficiency in the soil, aids in improving plant vigour and eliminating yellowing in leaves.

MAGNESIUM SULPHATE

(EPSOM SALTS)

- ✓ Corrects yellowing in older leaves
- ✓ Ideal for Gardenias, Azaleas & other acid loving plants
- ✓ Ideal for Tomatoes & Citrus

NET 500g

DIRECTIONS FOR USE

1 HEAPED  TEASPOON = 5g

EASY GUIDE CHART

APPLICATION	(g)	TEA SPOONS	IN LITRE WATER	COVERAGE
Soil	10g	2	1	1sq metre*
	50g	10	5	5sq metre*
Foliar	10	2	2	Spray over foliage to runoff point. Avoid spraying in direct sunlight

* For pot plants, water with this solution as normal.

MAGNESIUM SULPHATE ANALYSIS

9.8% Magnesium (Mg) as Magnesium Sulphate
12.5% Sulphur (S) as Magnesium Sulphate
